## Why use the Grip Ace™?

1. Clean Handlebars
2. Hidden switches under your fingers
3. Major savings on installation time and cost of labor
4. Wire any size handlebars in minutes
5. Will add self canceling turn signals to bikes not equipped.
6. 2 year warranty
7. Patented #7176586, #7466036

The Grip Ace™ digital switch system is a switching system that works on all motorcycles. It's the only switch system needed for custom or semi custom motorcycles. Works with stock bikes too.

The switch pad is designed so that the rider does not accidentally push the switches while riding. The switch pad is under your fingers, so all you do is simply lift a finger and push a button.

The switch pad can be fitted into most grips. Grip manufacturers are starting to include lines of their own grips with the Grip Ace™ system.

The switch pad can also be glued or mounted just about anywhere. Grip Ace™ carry's custom bezels that the switch pad can be securely mounted.

Pictured below are some left handgrips with the Grip Ace™ system.
